

1. PROJECT OVERVIEW

Company Name

NEXORA RETAIL SOLUTIONS

Empowering Smarter Sales. Delivering Greater Value.

Nexora Retail Solutions is a fast-growing retail and distribution company operating across multiple regions with a wide range of products, customers, and sales teams. With increasing data volume and business complexity, leadership aims to leverage data analytics to improve performance, optimize operations, and drive profitable growth.

Project Objective

To build an interactive and insightful sales analysis dashboard using Power Pivot in Excel that enables Nexora Retail Solutions to monitor performance, identify growth opportunities, optimize strategies, and make data-driven business decisions.

Business Problem Statement

The management lacks a unified view of sales performance across customers, products, regions, and salespeople. Current reports are fragmented, time-consuming, and lack drill-down capabilities, making it difficult to identify key trends, top/bottom performers, and areas needing improvement. There is a need for an integrated solution that consolidates data from multiple sources and provides actionable insights for strategic decision-making.

2. DATASET OVERVIEW

The data model follows a Star Schema with one fact table and multiple dimension tables.

DATA TABLES

Sales_Fact.csv

Fact Table

Contains transactional sales data including product sold, quantity, sales amount, discounts, cost, and keys to dimension tables.

Customer_Dim.csv

Dimension Table

Contains customer related information such as customer name, segment, type, and other demographic details.

Product_Dim.csv

Dimension Table

Includes product details such as product name, category, sub-category, brand, and other product attributes.

Region_Dim.csv

Dimension Table

Contains geographic information like region, state, city, and other territorial hierarchies.

Salesperson_Dim.csv

Dimension Table

Includes salesperson details such as name, team, role, and other performance related attributes.

Date_Dim.csv

Dimension Table

Includes date related attributes like day, month, quarter, year, and other time hierarchies.

DATA MODEL RELATIONSHIP

3. BUSINESS REQUIREMENTS

Unified Sales View

Consolidate sales data across customers, products, regions, and salespeople into a single, reliable source of truth.

Performance Monitoring

Track key sales metrics to monitor performance against targets and identify trends and patterns.

Customer Insights

Understand customer behavior, segmentation, and value to enhance retention and drive repeat business.

Product Performance

Evaluate product profitability, top-performing categories, and underperforming items to optimize product strategy.

Regional Analysis

Analyze regional and city-level performance to identify high-potential markets and areas needing improvement.

Salesperson Effectiveness

Measure individual and team performance to drive accountability, incentives, and continuous improvement.

Profitability & Cost Analysis

Analyze costs, discounts, and profit margins to improve pricing strategies and overall profitability.

5. ANALYTICAL AREAS

Customer Analytics

RFM analysis, customer segmentation, top customers, retention insights.

Product Analytics

Category analysis, top/low-performing products, profitability by product.

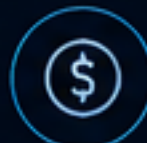

Geospatial Analytics

Region, state, city performance, market penetration, growth opportunities.

Salesperson Analytics

Individual & team performance, ranking, achievement vs targets.

Financial Analytics

Profitability analysis, discount impact, cost analysis, and margin optimization.

4. KEY PERFORMANCE INDICATORS (KPIs)

Total Sales

Overall revenue generated from all transactions.

Total Profit

Total profit after considering cost, discounts, and returns.

Profit Margin %

Profitability as a percentage of total sales.

Total Orders

Total number of orders placed.

New Customers

Total new customers acquired.

Active Customers

Customers who made purchases.

Top Products

Best-selling products by quantity and sales.

Top Regions / Cities

Highest performing regions and cities by sales and profit.

Salesperson Performance

Sales and profit achieved by salespeople.

Discount Impact

Impact of discounts on sales and profitability.

Return Rate

Percentage of returned items vs total sales.

Category Performance

Sales and profit performance by product category.

Sales vs Target

Actual sales compared to targets.

Growth %

Sales and profit growth compared to previous period.

Average Order Value (AOV)

Average value of each order.

6. RECOMMENDATIONS

- > Focus on high-profit products and categories; rationalize underperforming items.
- > Implement targeted marketing and loyalty programs for high-value customers.
- > Optimize inventory based on demand trends and regional performance.
- > Improve discount strategies to maximize profitability without losing volume.
- > Provide sales training and set performance-based incentives for sales teams.
- > Expand business in high-potential regions and cities.
- > Continuously monitor KPIs and set actionable targets for sustainable growth.

7. BUSINESS IMPACT

Data-Driven Decisions

Make faster and accurate decisions based on reliable data.

Revenue Growth

Identify opportunities to increase sales and expand market share.

Operational Efficiency

Optimize processes, reduce costs, and improve resource allocation.

Customer Satisfaction

Better customer understanding leads to improved experience and loyalty.

Sustainable Profitability

Improve margin, control costs, and drive long-term growth.

THIS PROJECT WILL HELP **NEXORA RETAIL SOLUTIONS** TRANSFORM RAW DATA INTO MEANINGFUL INSIGHTS AND DRIVE BUSINESS EXCELLENCE.
