

Excel Text Functions – Interview & Business Scenario Questions

Dataset: Employee & Business Operations Dataset

Instructions: Solve the following questions using appropriate Excel Text Functions. Think like a Data Analyst or Business Analyst working with raw business data.

Section A – Basic Text Manipulation

Q1.

The HR department wants to extract the employee code prefix (e.g., **EMP**) from every Employee ID to verify that all records follow the same naming convention.

Hint: LEFT

Q2.

Management needs only the numeric portion of the Employee ID to compare it with records stored in another system.

Hint: RIGHT

Q3.

The IT team wants to extract the department code embedded inside the Project Code for reporting purposes.

Hint: MID

Q4.

Before importing the dataset into the HRMS system, validate whether every PAN Number contains exactly 10 characters.

Hint: LEN

Q5.

The Operations team requires all Branch names to be displayed in uppercase for standardized reporting.

Hint: UPPER

Section B – Data Cleaning

Q6.

Customer names have inconsistent capitalization. Convert every Full Name into Proper Case before generating employee reports.

Hint: PROPER

Q7.

Email addresses are stored with inconsistent uppercase and lowercase letters. Standardize all emails into lowercase.

Hint: LOWER

Q8.

Several employee names contain unnecessary leading, trailing, or multiple spaces. Clean the Full Name column before analysis.

Hint: TRIM

Q9.

The Remarks column contains unwanted spaces entered during manual data entry. Remove all unnecessary spaces.

Hint: TRIM

Q10.

Before uploading the data into the CRM system, ensure all department names follow a consistent Proper Case format.

Hint: PROPER

Section C – Text Extraction

Q11.

Extract only the username from each Official Email ID.

Example:

rahul.sharma@company.com

↓

rahul.sharma

Hint: LEFT + FIND

Q12.

Extract only the domain name from every Official Email ID.

Example:

rahul.sharma@company.com

↓

company.com

Hint: RIGHT + LEN + FIND

Q13.

Extract the invoice number from the Invoice Number column without the prefix.

Example:

INV-2026-000245

↓

000245

Hint: RIGHT

Q14.

Extract the product category from the Product Code.

Example:

PRD-LAP-258

↓

LAP

Hint: MID

Q15.

Extract the customer number from the Customer Code.

Example:

CUS-10548

↓

10548

Hint: RIGHT

Section D – Data Validation

Q16.

The HR team wants to identify employees whose names contain more than 20 characters.

Create a new column showing the total number of characters.

Hint: LEN

Q17.

Verify whether all phone numbers contain exactly 10 digits before exporting the employee directory.

Hint: LEN

Q18.

The company follows a standard Employee ID format beginning with "EMP". Validate whether every Employee ID starts with the correct prefix.

Hint: LEFT

Q19.

The finance department wants to ensure every invoice number starts with "INV".

Hint: LEFT

Q20.

Verify whether every Product Code begins with "PRD".

Hint: LEFT

Section E – Business Scenario Questions

Q21.

The IT department wants to create employee usernames using the first name from the Full Name column.

Example:

Rahul Sharma

↓

Rahul

Hint: LEFT + FIND

Q22.

<https://www.linkedin.com/in/the-venom/>

Shivansh

Create another column containing only the employee's last name.

Example:

Rahul Sharma

↓

Sharma

Hint: RIGHT + LEN + FIND

Q23.

The company wants to generate display names using the format:

Employee Name | Branch

Example:

Rahul Sharma | Delhi

Hint: CONCAT or "&"

Q24.

Generate a unique employee key by combining:

Employee ID + Customer Code

Example:

EMP-10254-CUS4587

Hint: CONCAT

Q25.

The reporting team wants every department name prefixed with:

Department -

Example:

Department - Sales

Hint: CONCAT

Section F – Interview-Oriented Questions

Q26.

Your manager informs you that VLOOKUP is returning incorrect results because employee names contain extra spaces.

How would you clean the data before performing the lookup?

Hint: TRIM

Q27.

A customer uploaded employee names entirely in uppercase.

Convert the names into professional title case for the final report.

Hint: PROPER

Q28.

The marketing team requests all email addresses in lowercase before sending automated campaigns.

Apply the necessary transformation.

Hint: LOWER

Q29.

The business requires every branch name to appear in uppercase on executive dashboards for consistency. Transform the Branch column accordingly.

Hint: UPPER

Q30.

A new HR portal accepts only the numeric portion of Employee IDs. Extract the employee number while removing the text prefix.

Example:

EMP-105624

↓

105624

Hint: RIGHT

Bonus Challenge (Interview Level)

Q31.

Create a professional company email ID using the format:

firstname.lastname@company.com

using the Full Name column.

Q32.

Generate a login ID using:

First three letters of the first name + Employee Number.

Example:

Rahul Sharma → EMP-105624

↓

rah105624

Q33.

The company wants a standardized Product Category column extracted from Product Codes for dashboard filtering.

Q34.

Create a Data Quality Status column.

If the Employee ID starts with "EMP" **and** the PAN Number has exactly 10 characters, return:

Valid

Otherwise return:

Needs Verification

Q35.

Create a Business Key by combining:

Branch + Department + Employee ID

Example:

Delhi-HR-EMP10548

This key will be used later for joining datasets in Power BI and SQL.

Skills Covered

- LEFT
- RIGHT
- MID
- LEN
- UPPER
- LOWER
- PROPER
- TRIM
- FIND
- CONCAT / CONCATENATE / "&"

These questions simulate common **Data Analyst** and **Business Analyst** tasks involving data cleaning, validation, text extraction, and preparation before performing lookups, reporting, dashboard creation, or importing data into SQL and Power BI. They are also aligned with the type of practical exercises and interview scenarios candidates encounter in analytics roles.
